Opis produktu

SVEN Company presented SVEN MS-2100. 2.1 speaker system. This speaker system does ideally for watching movies, sounding computer games and playing the music. 80 W of powerful saturated sound will be enough to organize an evening party in honor of friends or to watch a sport telecast in a noisy company. The system can operate in standalone mode. The built-in player of audio files plays tracks from a USB drive or SD card. After having selected your favorite radio station on FM tuner, you can devote your evening to the reading of a book or a get-together with relatives over a cup of tea.

SVEN MS-2100 has two switched inputs. With their help the speaker system can be connected to any sound sources, for example, a PC or media player. The subwoofer and two-way satellites will expose the whole sound palette of the system in computer games and movies. The rich bass and crystal-clear high-frequencies reproduce the detailed sound panorama, due to which the presence effect increases, and emotions and impressions are just added.

It is very simple and convenient to control the system. There is an easy-to-interpret digital display and several control knobs on the subwoofer right side: to control the master volume of the system and to switch radio stations and tracks. The remote control has advanced options for the system control. With its help you can control the subwoofer volume or activate Mute or Sleep modes.

SVEN MS-2100 speaker system has a bright stylish design, which is able to enrich any interior. The front panels of the subwoofer and satellites are covered with black gloss and combine ideally with mat texture of their cases.
