Opis produktu

Nowadays everyone can construct his own home theater or sound-recording studio in the home. For this purpose you need only components of high quality, a little free space and a pair of sensible advices of specialists in the electronics field. For example, "Hi-Fi class speaker system does not need to be expansive", or "the volume-down does not lead to the sound quality loss".

SVEN Company presented MS-3000 2.1 speaker system, which in every sense has a claim on Hi-Fi sound level. Such audiophile technical solutions as the passive type subwoofer, two-way satellites with textile tweeters and the external power amplifier have been implemented in the triphonic. In other words, when you playback an audio track you will hear every sound participating in the record. If in a movie, a principal character speaks over the telephone while walking in the park, you will hear the rustle of leaves between his remarks. If during a concert a percussionist plays the small drum or high-hat on the background of powerful reefs of an electric guitar, you will also hear it. Such detail and fullness with sounds will remain even after considerable volume reduction due to the "Loudness" tone compensation mode. On condition that the number of audio tracks is not changed in a record, its volume down is perceived subjectively as the loss of some of them. The tone compensation strengthens the lowest and highest sounds, which with their small power are obscured perceptible for human hearing, and smoothes the voice panorama for a user.

Control elements (LF and HF controls) of the device and its commutation with other audio devices (smartphones, DVDs, multimedia players) are combined with the amplifier unit very successfully. This is the core of MS-3000 speaker system. Besides the controls, there are jacks to connect headphones, USB flash drives and SD cards, buttons to switch over inputs and FM-tuner in a small book-size case. These options turn it into a mini system and indicate the high autonomy of the system. In order not to be got confused in the variety of functions, you can control the speaker system via LED display. If a user searches a short way to the heart of the model, he can use the remote control. This gold key contains the same control functions as the amplifier unit with a substantial difference: it is considerably lighter and smaller than the amplifier.

The triphonic satellites have holes on their rear sides for their mounting on the wall. If there is free place on your worktable, you can use the classic method to place them – the subwoofer is on the floor and satellites are close to the monitor. Such variant is quite conservative, but in this case it provides the long service life for the system.

Specyfikacja produktu:

Producent SVEN

Model MS-3000

Total output power (RMS), W 80

Output power (RMS), W subwoofer: 40

satellites: 40 (2 × 20)

Frequency range, Hz subwoofer: 35 – 150

satellites: 150 – 25,000

Dimensions of subwoofer loudspeaker, mm Ø 165

Dimensions of satellite loudspeakers, mm midrange Ø 90; tweeter Ø 22

Remote control available

Magnetic shielding available

Power supply ~220V / 50Hz

Subwoofer case material wood (MDF)

Satellite case material wood (MDF)

Dimensions (subwoofer), mm 265 × 265 × 265

Dimensions (satellites), mm 120 × 202 × 125

Dimensions (amplifier), mm 69 × 200 × 220

Weight, kg 7.5

Color wiśniowy

Wersja opakowania BOX
